Ariella Vu

Senior Software Engineer

United States | Open to Relocation & Remote | ariellavu@gmail.com | linkedin.com/in/ariellavu | ariella.dev

PROFILE

Senior software engineer with 10 years of experience building products used by millions across e-commerce, CRM, and blockchain finance. At MetaMask, I led the frontend rebuild of 30+ transaction screens for 30M+ monthly active users, shipped transaction-simulation safeguards that protected users from phishing and unauthorized transfers, and served as security liaison triaging high-impact vulnerabilities. At Copper CRM, I built Gmail and Google Workspace integrations, partnered with Google to launch a Workspace add-on, and cut load times for 10K+ records by 97%.

EXPERIENCE

Senior Software Engineer II — MetaMask, Consensys

Remote | Open-source self-custody wallet, 30M+ monthly active users | January 2022 – September 2025 (promoted August 2023)

- **Transaction security:** Built the transaction simulation and signature protection UI for MetaMask's Blockaid integration, which ran checks on-device in WebAssembly so transaction data stayed private; the integration helped shut down Inferno Drainer, a phishing operation that claimed $80M+ in stolen funds
- **Sign-In with Ethereum (EIP-4361):** Blocked an approved external PR over security and UI defects, coached the contributor through fixes, then led the refactor and shipped to 150+ dApps
- **Security liaison:** Served as security liaison for the extension, triaging incoming vulnerability reports, setting severity and response, and leading investigations into XSS, cross-domain phishing, Unicode-based data obfuscation, and JavaScript supply-chain compromise
- **Financial accuracy:** Fixed a 7-year-old precision defect where large token amounts lost digits during JavaScript number parsing, plus related bugs in the financial values users relied on
- **Confirmations redesign:** Piloted a redesign spanning 30+ modal views and shipped it in two weeks, clearing a backlog of long-standing UI defects in the same effort
- **Manifest V3 migration:** Core developer on the cross-browser migration, re-architecting the extension around service workers and Node.js multiplex streams to keep the wallet compliant and shippable ahead of Chrome's MV2 deprecation
- **Ethereum standards:** Contributed to Ethereum Improvement Proposals through reviews and upstream pull requests, generated smart contracts for JSON-RPC testing, and discussed technical specs and concerns with proposal authors
- **Observability:** Found and fixed critical Mixpanel and Sentry misconfigurations affecting data integrity across the product
- **Community and ecosystem:** Presented technical workshops, mentored at three external hackathon events involving hundreds of developers, and built external partnerships driving third-party Snaps integrations

Senior Software Engineer — Copper CRM

San Francisco, CA & Remote | B2B SaaS | August 2016 – April 2021 (promoted June 2019)

- **Technical direction:** Set client-side technical direction through 7 written architectural proposals, all later implemented, including complex refactors
- **Performance:** Cut rendering latency for datasets exceeding 10,000 records from 1250 ms to 41 ms (~97%), then presented the memory-leak and performance findings org-wide
- **A/B testing platform:** Served as client-side technical lead for a custom A/B testing platform, unlocking data-driven decisions across analytics, research, and feature flagging
- **Google partnership:** Acted as tech lead on the Google partnership, launching a Workspace add-on through their Beta Program and delivering a Chrome extension that put CRM records directly in Gmail
- **Product UI:** Led Ember.js development of accessible, responsive UI/UX including dashboards, infinite-scroll lists, first-time user experiences, and an in-app RingCentral VoIP service
- **Pricing tooling:** Built the responsive pricing page and a Ruby on Rails–backed admin tool that let stakeholders change plans and pricing behind feature flags, no deploy required

- **Hiring:** Interviewed 15+ candidates, authored the technical coding challenge, and refined the evaluation criteria the team hired against
- **Integrations:** Implemented third-party platforms including Mixpanel, Pendo, Segment, and Google Tag Manager
- **AMP email:** Shipped AMP emails enabling recipients to reply or react with emojis from within their own inbox
- **First remote employee (2018):** Helped set the company's remote practices

Software Engineer — Wayvia (formerly PriceSpider)

Irvine, CA | Retail commerce data platform | February 2015 – June 2016

- **Analytics application:** Launched a MEAN-stack AngularJS analytics application with RESTful APIs in 4.5 months, and designed the foundational PostgreSQL and MongoDB schemas
- **Brand widgets:** Developed 25+ responsive, cross-browser “Where to Buy” widgets used by global brands including Samsung, Canon, and Mars
- **Authentication:** Architected the authentication system and login flow with brute-force prevention via server-side session tracking and attempt limiting, plus role-based access control with granular read/write permissions
- **Data pipelines:** Authored resilient data-extraction services parsing store and product data from retailer sites across multiple languages, using request rotation and rate-limit handling to keep collection stable
- **Leadership**: Identified knowledge gaps across the engineering team, then created and hosted weekly AngularJS meetings to share performance techniques and best practices

SELECTED WORK

- **Manifest V3 migration:** Service-worker re-architecture of the MetaMask extension pull/15494, pull/16075
- **Precision fix:** 7-year-old defect affecting financial accuracy pull/25741
- **Sign-In with Ethereum:** Defects caught in an approved change, scoped epic, shipped rework pull/14438, issues/18471

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Sass

Front-End: React, React Native, Next.js, Ember.js, Redux, Chrome Extensions (Manifest V3), Tailwind CSS, Storybook

Back-End & Data: Node.js, Express, REST API design, PostgreSQL

Security: Application security, vulnerability triage, phishing & XSS prevention, JS supply-chain security, secure UI/UX

Tooling: GitHub Actions, Jest, Sentry, Vercel, Claude Code (AI-assisted development), Mixpanel, Segment

Practices: Frontend architecture, performance optimization, accessibility, A/B testing, internationalization

EDUCATION

B.S., Computer Science — University of California, Davis | September 2010 – September 2014
